OUTSIDE | **DREAMING**

The **G**ennius is a new innovation in the old world of awnings and canopies.

Designed to improve and expand your outdoor living or dining space, this waterproof retractable fabric structure combines the beauty of a pergola with the flexibility of a retractable awning. The **G**ennius is available with integrated rain management technology, and is specifically designed to withstand inclement weather.

- Extend your outdoor living season
- Wedding and banquet halls can guarantee dry functions
- Restaurants can create or expand outdoor seating
- Improve the ambiance with optional integrated LED lighting and Audio
- Generate revenue even in inclement weather
- Fully protect your space with optional perimeter solar shades (not all modes)
- Improve dining and entertainment space for County Clubs and more...

T1

The Gennius T1 model retro-fits to an existing structure. Its aluminum guide rails extend horizontally, supporting the fabric and keeping it tight when projected; perfect for waterproofing and or shading an open area.

Capable of installing onto pergolas, between walls, and more, the T1 has no posts, allowing you to be creative and flexible with attachment methods.

Available with a single motorized, waterproof fabric cover up to 42'8" wide.

Projects up to up to 29'6".

A1

The A1, our entry-level model; utilizes the same horizontally projecting guide rail technology and waterproof retractable fabric, but is supported by integrated front posts.

Available with a single motorized, waterproof fabric cover up to 42'8" wide.

Projects up to up to 21'4".

Available with integrated front solar screens

KE Durasol's Gennius is one of the world's most technologically advanced retractable awnings .

The Gennius can protect you from the wind and rain, block harmful UV rays and keep you cool and comfortable in the brightest sunshine. KE Durasol's Gennius can cover a small deck, a large patio, or an expansive pavilion. The optional hood for the Gennius keeps debris from collecting in the fabric when it is retracted, which is available on all models. The heavy-duty fabric meets California State Fire Marshal Section 13115

Health and Safety Code.

Choose to block either 90% or 100% of damaging and uncomfortable UV light and heat, while keeping the inclement weather under control. The blackout fabric prevents shadow lines that appear below from environmental pollution and debris that can settle on the top cover. Create a waterproof "retractable enclosure" (not all models) with optional manual or motorized "zip" solar shades installed along the perimeter walls.

pure gennius

A2C

The Gennius A2c model is our most heavy-duty model; perfect for waterproofing and or shading larger areas. The refined lines of the A2c blend seamlessly with traditional to contemporary architecture.

With the capability of clear-spanning an incredible 26'4" projection, the A2c can instantly create 1,000+ square feet of oasis with the touch of a button. Available with a single motorized, waterproof fabric cover up to 42'8" wide.

Projects up to up to 26'4".

L1S

The Gennius L1 has the traditional appearance of a wooden pergola.

The fabric guiderail system is supported by engineered laminated layer wood rafters, header, and columns. Strong and durable, but with the traditional warmth and appeal of wood.

The blackout layer in the center blocks 100% of damaging and uncomfortable UV light and heat, keeps the rainwater off your head, and prevents the shadow lines that appear below from environmental pollution that settles on the top side.

The coated fabrics have been designed to meet the high quality standards required by the tensile structures and large coverings market. All coated fabrics are produced with tough polyester as a further guarantee of the high resistance and physical mechanical properties required in textile architecture. The special coating formulation gives the fabrics excellent durability, greater protection against mold, and resistance to the action of

UV rays and environmental factors that cause aging. The fabric is calendered using a special calendering technology. This lacquering, which is high frequency or hot air sealable protects and further isolates the layer of PVC against the atmospheric agents.

CERTIFICATION

EN 13561 – Wind Resistance – Class 3

The Gennius design principle is to achieve both aesthetic beauty and durable, reliable function. All of Gennius' components are designed and manufactured to satisfy these goals. Gennius is tested and approved to comply with standard EN 13561, Class 3: the most stringent standard. In fact, the actual test results indicate that Gennius' performance is superior to the standards specified in EN 13561.

All Gennius models have the CE Certification, an assurance of quality.

WARRANTY

Limited Lifetime on the Aluminum Structural Frame and Components

5 Years on the Fabric, Motor, and Electronics
